

City of Pascagoula ARPA Project Information Sheet

Project Name: South River Road Lift Station and Force Main Replacement

Project Description: The project consists of the replacement and upsizing of the lift station serving the South River Road area of Pascagoula, MS. The project would include a new duplex pump lift station (wetwell, pumps, controls, etc.) to replace the existing lift station, as well as the replacement of approximately 2,000 linear feet of undersized and deteriorating sewer force main.

Project Justification: The existing sewer lift station on South River Road is undersized and frequently in need of maintenance. The current station is unable to sustain the required flow to serve the sewage collection system in this area. The force main for this station frequently experiences collapses and blockages that require immediate maintenance in order to prevent sewage overflows. Replacement of these components will ensure that the sewage flows in this area can be adequately managed without potential overflows and will reduce the increasing maintenance costs related to the deteriorating infrastructure.

Project Cost: The estimated construction cost for the proposed improvements in this project is **\$1,200,000.00**. The proposed cost sharing structure is as follows:

- City of Pascagoula Share: \$300,000.00
- Jackson County Share: \$300,000.00
- MCWI Grant Program Share: \$600,000.00
